MECH 151: Technical Design – Prototyping

Self Reflection

Final Exam — Prototype Project (individual submission)

Due: Wednesday, December 16, 2026, by 6:30 PM — submitted with your Final Exam at CE405

This is an individual submission — each team member completes and submits their own copy.

Your Name: _____

Team Name / Number: _____

Date: _____

Prompts to Address

- Your Contribution — describe your individual role and contributions to the prototype project. Be specific about what you personally designed, built, documented, or figured out.
- What Went Well — what part of the process (design, teamwork, manufacturing, documentation) went well for you?
- Challenges & What You'd Do Differently — what was harder than expected? Looking back, what would you change about your design, process, or teamwork?
- Connecting to the Course Objectives — the prototype is where you produced a component using CAM software and built a prototype from multiple substrates. What did taking a part from CAD model to manufacturing-ready file to physical part teach you that modeling alone did not?

Keep your self reflection to 2 pages or less.

The contributions you claim here should match what's listed for you in your team's Work Breakdown Summary.
